INTRODUCTION & INSTRUCTIONS FOR USE

The following State or Contract Specific Clinical Criteria1 defined by state regulations or contractual requirements are used to make medical necessity determinations, mandated for members of behavioral health plans managed by Optum and U.S. Behavioral Health Plan, California (doing business as OptumHealth Behavioral Solutions of California (“Optum-CA”)).

Other Clinical Criteria2 may apply when making behavioral health medical necessity determinations for members of behavioral health plans managed by Optum®3. These may be externally developed by independent third parties used in conjunction with or in place of these Clinical Criteria when required, or when state or contractual requirements are absent for certain covered services. When deciding coverage, the member’s specific benefits must be referenced.

All reviewers must first identify member eligibility, the member-specific benefit plan coverage, and any federal or state regulatory requirements that supersede the member’s benefits prior to using these Clinical Criteria. In the event that the requested service or procedure is limited or excluded from the benefit, is defined differently or there is otherwise a conflict between this Clinical Criteria and the member’s specific benefit, the member’s specific benefit supersedes these Clinical Criteria.

These Clinical Criteria are provided for informational purposes and do not constitute medical advice.

EVIDENCED-BASED PRACTICE CRITERIA

In addition to the applicable Clinical Criteria, for all services, treatments and levels of care, services are delivered according to evidence-based practices consistent with the applicable definition of Medical Necessity and the following:

- Services are:
  - Provided under an individualized plan of treatment or diagnostic plan developed in conjunction with providers of appropriate disciplines on the basis of a thorough evaluation of the member’s strengths and disabilities;
  - Supervised and evaluated by the most appropriate physician or provider;
  - For the purpose of diagnosis or services are reasonably expected to improve the member’s condition:

---

1 Clinical Criteria (State or Contract Specific): Criteria used to make medical necessity determinations for mental health disorder benefits when there are explicit mandates or contractual requirements.

2 Clinical Criteria:
   - (Level of Care Utilization System-LOCUS) Standardized level of care assessment tool developed by the American Association of Community Psychiatrists used to make medical necessity determinations and placement decisions for adults ages 19 and older.
   - (Child and Adolescent Service Intensity Instrument-CASII) - Standardized assessment tool developed by the American Academy of Child and Adolescent Psychiatry used to make medical necessity determinations and to provide level of service intensity recommendations for children and adolescents ages 6-18.
   - (Early Childhood Service Intensity Instrument-ECSII) - Standardized assessment tool developed by the American Academy of Child and Adolescent Psychiatry used to make medical necessity determinations and to provide level of service intensity recommendations for children ages 0-5.
   - (ASAM Criteria) Criteria used to make medical necessity determinations for substance-related disorder benefits.

3 Optum is a brand used by United Behavioral Health and its affiliates.

Proprietary Information of Optum. Copyright 2019 Optum, Inc.
• It is not necessary that a course of therapy have as its goal restoration of the member to the level of functioning exhibited prior to the onset of the illness, although this may be appropriate for some members. For many other members, particularly those with long-term, chronic conditions, control of symptoms and maintenance of a functional level to avoid further deterioration or hospitalization is an acceptable expectation of improvement.

• "Improvement" in this context is measured by comparing the effect of continuing treatment versus discontinuing it. Where there is a reasonable expectation that if treatment services were withdrawn the member’s condition would deteriorate, relapse further, or require hospitalization, this criterion is met.

• The individualized written plan includes the type, amount frequency, and duration of the services to be furnished and indicate the diagnoses and anticipated goals.

• For continued service, the member continues to show improvement in accordance with his/her individualized treatment plan, and the frequency of services is within accepted norms of medical practice.

• Discharge is indicated when stability can be maintained without further treatment or with less intensive treatment.
  o Discharge planning includes linkages with community resources, supports, and providers in order to promote a member’s return to a higher level of functioning in the least restrictive environment.
  o A discharge plan and a summary with recommendations for appropriate services concerning follow-up or aftercare have been developed as well as a summary of the member’s condition upon discharge.
APPLIED BEHAVIOR ANALYSIS (ABA)

ABA is a scientific discipline among the helping professions that focuses on the analysis, design, implementation, and evaluation of social and other environmental modifications to produce meaningful changes in human behavior. ABA includes the use of direct observation, measurement, and functional analysis of the relations between environment and behavior. ABA uses changes in environmental events, including antecedent stimuli and consequences, to produce practical and significant changes in behavior. These relevant environmental events are usually identified through a variety of specialized assessment methods. ABA is based on the fact that an individual's behavior is determined by past and current environmental events in conjunction with organic variables such as their genetic endowment and physiological variables. Thus, when applied to ASD, ABA focuses on treating the problems of the disorder by altering the individual’s social and learning environments. (Behavior Analyst Certification Board Inc., 2014).

For Medi-Cal members, Applied Behavior Analysis (ABA) is covered for the treatment of developmental disorders not limited to Autism Spectrum Disorder in children when the following conditions are met:

- The intervention is a systematic approach, based on the principles of comprehensive applied behavior analysis.
- Medically necessary to correct or ameliorate behavioral conditions as defined in Section 1905(r) of the SSA and as determined by a licensed physician and surgeon or licensed psychologist.
- Delivered in accordance with the member’s Managed Care Health Plan (MCP)-approved behavioral treatment plan.
- Provided by California State Plan approved providers defined in SPA 14-026.95.
  - Board Certified Behavior Analyst (BCBA)
  - Licensed Practitioner
  - Associate Behavior Analyst
  - Behavior Analyst
  - Behavior Management Assistant
  - Behavior Management Consultant
  - Paraprofessional
- Provided and supervised according to an MCP-approved behavioral treatment plan developed by a Behavioral Health Treatment (BHT) service provider credentialed as specified in SPA 14 - 026 (“BHT Service Provider”).

Diagnostic and Treatment Criteria

- Diagnostic Evaluation
  - In order to be eligible for services, a Medi-Cal member must meet all of the following coverage criteria:
    - Be under 21 years of age.
    - Have a recommendation from a licensed physician and surgeon or a licensed psychologist that evidence-based BHT services are medically necessary.
    - Be without a need for 24-hour medical/nursing monitoring or procedures provided in a hospital or intermediate care facility for persons with intellectual disabilities (IC F/ID).
    - Comprehensive diagnostic evaluations should occur including psychiatric assessments, interviews, review of records, psychological, and communication assessments.

Treatment Planning

Once the developmental disorder diagnosis has been established:

- A standardized functional assessment is used to maximize the effectiveness and efficiency of behavioral support interventions (Myers and Johnson, reaffirmed 2014). The assessment may incorporate information such as interviews with caregivers, structured rating scales, direct observation data, and attention to coexisting medical conditions (Behavior Analyst Certification Board, 2014)
- Targets include areas such as the following:
o Communication skills
o Language skills
o Social interaction skills
o Restricted, repetitive patterns of behavior, interests, or activities
o Self-injurious, violent, destructive or other maladaptive behavior

• A credentialed provider with ABA expertise is identified to provide treatment. Examples include (e.g., Behavior Analyst Certification Board, 2014):
  o A Master- or Doctoral-level provider that is a Board Certified Behavior Analyst (BCBA)
  o A licensed behavioral health clinician who has attested to having sufficient expertise and has been credentialed to provide ABA services
  o A Board Certified Assistant Behavior Analyst (BCaBA) or non-licensed individual under the direct supervision of a BCBA or licensed behavioral health clinician who takes responsibility for the member’s care that does either of the following:
    ▪ Assist in the initial or concurrent assessment of the member’s deficits or adaptive behaviors
    ▪ Implement a treatment plan that has been developed by a BCBA or licensed behavioral health clinician
  o Paraprofessional interventions must be directly supervised with the child present at least 1 hour per month, up to 8 hours per month, not to exceed 1 hour for every 10 hours of direct care provided.

• Outcome-oriented interventions targeting specific baseline behaviors are identified in a treatment plan describing the frequency, intensity, duration and progress that will be continuously updated.
  o Treatment planning a minimum of 1 hour per month up to 8 hours per month (not to exceed 1 hour for every 10 hours of direct service).
  o The treatment plan must address how the parents/guardians will be trained in management skills that can be generalized to the home.
    ▪ Parent/guardian training is an expectation. In the rare circumstance that parent/guardian is unable the documentation must reflect the reason and identify an alternate plan to provide management skills in the home.
    ▪ The treatment goals and objectives must be comprehensive and clearly stated.
    ▪ The treatment plan is in sync with the child’s Individual Family Service Plan (IFSP) / Individualized Education Plan (IEP).
    ▪ All components of the child’s care are tracked and updated throughout the duration of services.

Treatment

• Interventions must include the following elements:
  o Mitigate the core features of ASD or other developmental disorders
  o Target specific deficits related to imitation, attention, motivation, compliance and initiation of interaction, and the specific behaviors that are to be incrementally taught and positively reinforced
  o Tie to objective and quantifiable treatment goals that have projected timeframes for completion
  o Include the child’s parents in parent training and the acquisition of skills in behavior modification to promote management of skills within the home
  o Train family members and other caregivers to manage problem behavior and interact with the child in a therapeutic manner
  o As indicated, include psychotherapy (e.g., cognitive behavioral therapy) for higher functioning children to treat conditions such as anxiety and anger management

• Have an appropriate level of intensity and duration driven by factors such as:
  o Treatment goals
  o Changes in the targeted behavior(s)/response to treatment
  o The demonstration and maintenance of management skills by the parents and caregivers
  o Whether specific issues are being treated in a less intensive group format (e.g., social skills groups)
The child’s ability to participate in ABA given attendance at school, daycare or other treatment settings

- The impact of co-occurring behavioral or medical conditions on skill attainment

- Parent/Caregiver support is expected to be a component of the ABA program, as they will need to provide additional hours of behavioral interventions. Parents or caregivers must be involved and engaged in the training and follow through on treatment recommendations beyond that provided by licensed or certified practitioners. Parent support groups are considered not medically necessary.

- Services are intensive and may be provided daily, but ordinarily will not exceed 8 hours per day or 40 hours per week inclusive of other interventions. These hours of service also take into account other non-behavioral services such as school, speech, and occupational therapies, generally covered by other entities.

**Coordination of Care**

If applicable, documentation of communication and coordination with other service providers and agencies, (i.e. day care, preschool, school, early intervention services providers) and/or other allied health care providers (i.e. occupational therapy, speech therapy, physical therapy and any other applicable providers) to reduce the likelihood of unnecessary duplication of services.

Documentation should include the following:

- Type of therapy provided
- Number of therapies per week
- Behaviors/deficits targeted
- Progress related to the treatment/services being provided
- Measureable criteria for completing treatment with projected plan for continued care after discharge from ABA therapy
- Total number of days per week and hours per day of direct services to child and parents or caregivers to include duration and location of requested ABA therapy
- Dates of service requested
- Licensure, certification and credentials of the professionals providing ABA services to the child
- Evidence that parents and/or caregivers have remained engaged in the treatment plan, following all appropriate treatment recommendations.

  - Detailed description of interventions with the parent(s) or caregiver(s), including:
    - Parental or caregiver education, training, coaching and support
    - Overall parent or caregiver goals including a brief summary of progress. As part of the summary of progress the information should also include percentage of planned sessions attended
    - Plan for transitioning ABA interventions identified for the child to the parents or caregivers.

**Continued Treatment Criteria**

- With each medical necessity review for continued ABA treatment, an updated treatment plan and progress reports will be required for review, including all of the following documentation:
  - There is a reasonable expectation on the part of the treating clinician that the child’s behavior and skill deficits will continue to improve to a clinically meaningful extent, in at least two settings (home, school, community) with ABA services.
  - Therapy is not making the symptoms or behaviors persistently worse
  - Progress is assessed and documented for each targeted symptom and behavior, including progress toward defined goals, and including the same modes of measurement that were utilized for baseline measurements of specific symptoms and behaviors.
  - The treatment plan and progress report should reflect improvement from baseline in skill deficits and problematic behaviors using validated assessments of adaptive functioning.
When there has been inadequate progress with targeted symptoms or behaviors, or no demonstrable progress within a six month period, or specific goals have not been achieved within the estimated timeframes, there should be an assessment of the reasons for inadequate progress or not meeting the goals, and treatment interventions should be modified or changed in order to attempt to achieve adequate progress.

- Documentation of such an assessment and subsequent treatment plan change(s) must include:
  - Increased time and/or frequency working on targets
  - Change in treatment techniques
  - Increased parent/caregiver training
  - Identification and resolution of barriers to treatment effectiveness
  - Any newly identified co-existing disorder (e.g., anxiety, psychotic disorder, mood disorder)
  - Goals reconsidered (e.g., modified or removed)

When goals have been achieved, either new goals should be identified that are based on targeted symptoms and behaviors that are preventing the child from adequately participating in age-appropriate home, school or community activities, or that are presenting a safety risk to self, others, or property; or, the treatment plan should be revised to include a transition to less intensive interventions.

**Discharge Criteria**

- When any of the following criteria are met the child will be considered discharged and any further ABA services will be considered not medically necessary:
  - Documentation that the child demonstrates improvement from baseline in targeted skill deficits and behaviors to the extent that goals are achieved or maximum benefit has been reached
  - Documentation that there has been no clinically significant progress or measurable improvement for a period of at least 3 months in the child’s behaviors or skill deficits in any of the following measures:
    - Adaptive functioning
    - Communication skills
    - Language skills
    - Social skills
  - The treatment is making the skill deficits and/or behaviors persistently worse
  - The child is unlikely to continue to benefit or maintain long term gains from continued ABA therapy
  - Parents and/or caregivers have refused treatment recommendations or are unable to participate in the treatment program and/or do not follow through on treatment recommendations to an extent that is needed.

---

4 Necessary health care, diagnostic services, treatment, and other measures described in section 1905(a) to correct or ameliorate defects and physical and mental illnesses and conditions discovered by the screening services, whether or not such services are covered under the State plan https://www.ssa.gov/OP_Home/ssact/title19/1905.htm.
