United Behavioral Health

Washington Integrated Managed Care Medicaid Level of Care Guidelines

Document Number: BH803WALOCG042019  Effective Date: April, 2019

Table of Contents

Introduction
Instructions for Use
Common Criteria
Common Clinical Best Practices
Mental Health: 23 Hour Observation
Mental Health: Crisis Stabilization & Assessment
Mental Health: Day Treatment
Mental Health: Inpatient
  Institutes for Mental Disease (IMD)
  Children’s Long Term Inpatient Programs (CLIP)
Mental Health: Intensive Outpatient Program
Mental Health: Outpatient
Mental Health: Partial Hospital Program
Mental Health: Residential Treatment Facility (RTF)
Mental Health: Wraparound Services with Intensive Services (WISe)
Wraparound Services: Assertive Community Treatment
Wraparound Services: Case Management
Wraparound Services: Family Peer Services and Supports
Wraparound Services: Peer Services and Supports
Wraparound Services: Psychosocial Rehabilitation
Wraparound Services: Respite Care
Wraparound Services: Sober Living Arrangements
Wraparound Services: Supervised Living Arrangements
Wraparound Services: Therapeutic Foster Care
References
Revision History
The Level of Care Guidelines is a set of objective and evidence-based behavioral health criteria used by medical necessity plans to standardize coverage determinations, promote evidence-based practices, and support members’ recovery, resiliency, and wellbeing for behavioral health benefit plans that are managed by Optum and U.S. Behavioral Health Plan, California (doing business as OptumHealth Behavioral Solutions of California (“Optum-CA”)).

INSTRUCTIONS FOR USE

This guideline is used to make coverage determinations as well as to inform discussions about evidence-based practices and discharge planning for behavioral health benefit plans managed by Optum®¹. When deciding coverage, the member’s specific benefits must be referenced.

All reviewers must first identify member eligibility, the member-specific benefit plan coverage, and any federal or state regulatory requirements that supersede the member's benefits prior to using this guideline. In the event that the requested service or procedure is limited or excluded from the benefit, is defined differently or there is otherwise a conflict between this guideline and the member's specific benefit, the member's specific benefit supersedes this guideline. Other clinical criteria may apply. Optum reserves the right, in its sole discretion, to modify its clinical criteria as necessary using the process described in Clinical Criteria.

This guideline is provided for informational purposes. It does not constitute medical advice.

Optum may also use tools developed by third parties that are intended to be used in connection with the independent professional medical judgment of a qualified health care provider and do not constitute the practice of medicine or medical advice.

Optum may develop clinical criteria or adopt externally-developed clinical criteria that supersede this guideline when required to do so by contract or regulation.

COMMON CRITERIA

Admission Criteria

- The member’s current condition cannot be safely, efficiently, and effectively assessed and/or treated in a less intensive level of care.
  - Failure of treatment in a less intensive level of care is not a prerequisite for authorizing coverage.
  - The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation including co-occurring behavioral health or medical conditions, informed by the information collected by the provider following evaluation and treatment planning described in the Common Best Practices.

  AND

- The member’s condition can be safely, efficiently, and effectively assessed and/or treated in the proposed level of care. Assessment and/or treatment of the member’s condition require the intensity and scope of services provided in the proposed level of care.
  AND

- Co-occurring behavioral health and medical conditions can be safely managed in the proposed level of care.
  AND

- Services are medically necessary.
  AND

- For all levels of care, services must be for the purpose of diagnostic study or reasonably be expected to improve the patient’s condition. The treatment must, at a minimum, be designed to reduce or control the patient’s psychiatric symptoms so as to prevent relapse or hospitalization, and improve or maintain the patient’s level of functioning.

¹ Optum is a brand used by United Behavioral Health and its affiliates.
It is not necessary that a course of therapy have as its goal restoration of the patient to the level of functioning exhibited prior to the onset of the illness, although this may be appropriate for some patient. For many other psychiatric patients, particularly those with long-term chronic conditions, control of symptoms and maintenance of a functional level to avoid further deterioration or hospitalization is an acceptable expectation of improvement. "Improvement" in this context is measured by comparing the effect of continuing treatment versus discontinuing it. Where there is a reasonable expectation that if treatment were withdrawn the patient's condition would deteriorate, relapse further, or require hospitalization, this criterion is met.

In addition to the above, for outpatient services, some patients may undergo a course of treatment that increases their level of functioning but then reach a point where further significant increase is not expected. Such claims are not automatically considered noncovered because conditions have stabilized, or because treatment is now primarily for the purpose of maintaining a present level of functioning. Rather, coverage depends on whether the criteria discussed above are met; for example, that stability can be maintained without further treatment or with less intensive treatment.

Continuing Stay Criteria

- The admission criteria continue to be met and active treatment is being provided. For treatment to be considered "active", service(s) must be as follows:
  - Supervised and evaluated by the admitting provider;
  - Provided under an individualized treatment plan consistent with Common Clinical Best Practices;
  - Reasonably expected to improve the member's presenting problems.

- The factors leading to admission have been identified and are integrated into the treatment and discharge plans.

- Clinical best practices are being provided with sufficient intensity to address the member's treatment needs.

- The member's family and other natural resources are engaged to participate in the member's treatment as clinically indicated and feasible.

Discharge Criteria

- The continued stay criteria are no longer met. Examples include:
  - The member's condition no longer requires care.
  - The member's condition has changed to the extent that the condition now meets admission criteria for another level of care.
  - Treatment is primarily for the purpose of providing social, custodial, recreational, or respite care.
  - The member requires medical/surgical treatment.
  - After an initial assessment the member is unwilling or unable to participate in treatment despite motivational support or intervention to engage in treatment, and involuntary treatment or guardianship is not being pursued.

COMMON CLINICAL BEST PRACTICES

Introduction

In assessing whether the criteria set forth in these guidelines is satisfied, staff should consider the clinical information collected from the provider following evaluation and treatment planning described in Common Clinical Best Practices. Staff should update the clinical information through continued consultation with the provider at appropriate intervals as the treatment progresses, including information about new or different symptoms or conditions that may emerge in the course of treatment.
Evaluation & Treatment Planning

- The initial evaluation:
  - Gathers information about the presenting issues from the member’s perspective, and includes the member’s understanding of the factors that lead to requesting services;
  - Focuses on the member’s specific needs;
  - Identifies the member’s goals and expectations;
  - Is completed in a timeframe commensurate with the member’s needs, or otherwise in accordance with clinical best practices.

- The provider collects information from the member and other sources, and completes an initial evaluation of the following:
  - The member’s chief complaint;
  - The history of the presenting illness;
  - The factors leading to the request for service;
  - The member’s mental status;
  - The member’s current level of functioning;
  - Urgent needs, including those related to the risk of harm to self, others, and/or property;
  - The member’s use of alcohol, tobacco, or drugs;
  - Co-occurring behavioral health and physical conditions;
  - The member’s history of behavioral health services;
  - The member’s history of trauma;
  - The member’s medical history and current physical health status;
  - The member’s developmental history;
  - Pertinent current and historical life information;
  - The member’s strengths;
  - Barriers to care;
  - The member’s instructions for treatment, or appointment of a representative to make decisions about treatment;
  - The member’s broader recovery, resiliency, and wellbeing goals.

- The provider uses the findings of the evaluation to assign a DSM-ICD diagnosis.

- The provider and, whenever possible, the member use the findings of the initial evaluation and diagnosis to develop a treatment plan. The treatment plan addresses the following:
  - The short- and long-term goals of treatment;
  - The type, amount, frequency, and duration of treatment;
  - The expected outcome for each problem to be addressed expressed in terms that are measurable, functional, time-framed, and related to the factors leading to admission;
  - How the member’s family and other natural resources will participate in treatment when clinically indicated;
  - How treatment will be coordinated with other provider(s), as well as with agencies or programs with which the member is involved.

- As needed, the treatment plan also includes interventions that enhance the member’s motivation, promote informed decisions, and support the member’s recovery, resiliency, and wellbeing. Examples include psychoeducation, motivational interviewing, recovery and resiliency planning, advance directive planning, and facilitating involvement with self-help and wraparound services.

- The provider informs the member of safe and effective treatment alternatives, as well as the potential risks and benefits of the proposed treatment. The member gives informed consent acknowledging willingness and ability to participate in treatment and abide by safety precautions.

- Treatment focuses on the member’s condition including the factors precipitating admission to the point that the member’s condition can be safely, efficiently, and effectively treated in a less intensive level of care, or the member no longer requires care.

- The treatment plan and level of care are reassessed when the member’s condition improves, worsens, or does not respond to treatment.
  - When the member’s condition has improved, the provider determines if the treatment plan should be altered, or if treatment is no longer required.
  - When the member’s condition has worsened or not responded to treatment, the provider verifies the diagnosis, alters the treatment plan, or determines if the member’s condition should be treated in another level of care.

- In the event that all information is unavailable at the time of the evaluation, there must be enough information to provide a basis for the diagnosis, guide the development of the treatment plan, and support the need for treatment in the proposed level of care.
Discharge Planning

- The provider and, whenever possible, the member develops an initial discharge plan at the time of admission, and estimates the length of treatment.
- The provider and, whenever possible, the member updates the initial discharge plan during the admission, ensuring that:
  - An appropriate discharge plan is in place prior to discharge;
  - The discharge plan is designed to mitigate the risk that the factors precipitating admission will reoccur;
  - The member agrees with the discharge plan.
- For members continuing treatment:
  - The discharge plan includes the following:
    - The discharge date;
    - The post-discharge level of care, and the recommended forms and frequency of treatment;
    - The name(s) of the provider(s) who will deliver treatment;
    - The date of the first appointment, including the date of the first medication management visit;
    - The name, dose, and frequency of each medication, with a prescription sufficient to last until the first medication management visit;
    - An appointment for necessary lab tests;
    - Resources to assist the member with overcoming barriers to care, such as lack of transportation or child care;
    - Recommended self-help and community support services;
    - Information about what the member should do in the event of a crisis prior to the first appointment.
- For members not continuing treatment:
  - The discharge plan includes the following:
    - The discharge date;
    - Recommended self-help and community support services;
    - Information about what the member should do in the event of a crisis or to resume services.
  - The provider explains the risk of discontinuing treatment when the member refuses treatment or repeatedly does not adhere with the treatment plan.

MENTAL HEALTH: 23 HOUR OBSERVATION

**23 Hour Observation**: A program that provides a medically-safe environment for up to 23 hours during which the factors that precipitated the need for service (e.g., changes in the member’s signs and symptoms, psychosocial and environmental factors, or level of functioning) are rapidly assessed and stabilized to the point that the member’s condition can be safely, efficiently, and effectively treated in an ambulatory setting, or it is determined that the member’s condition requires treatment in a more intensive level of care.

**Admission Criteria**

- See Common Criteria
- The factors leading to admission and/or the member’s history of treatment suggest that the member is likely to respond to rapid assessment and stabilization.
- The factors leading to admission require immediate assessment and intervention to determine if admission to an inpatient setting is warranted.

**Continuing Stay Criteria**

- See Common Criteria

**Discharge Criteria**

- See Common Criteria
Clinical Best Practices

- See Common Clinical Best Practices
- The focus of evaluation and treatment planning is to determine whether the member’s condition can be safely, efficiently, and effectively treated in an ambulatory setting, or whether the member should be admitted to an inpatient setting.

### MENTAL HEALTH: CRISIS STABILIZATION & ASSESSMENT

**Crisis Stabilization & Assessment:** A program in which the factors that precipitated the need for service (e.g., changes in the member’s signs and symptoms, psychosocial and environmental factors, or level of functioning) are rapidly assessed and stabilized to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care, or it is determined that the member’s condition requires treatment in a more intensive level of care.

There are different types of Crisis Stabilization & Assessment programs. For example, mobile crisis teams are designed to rapidly triage members in crisis who are unable or unwilling to go to an Emergency Room or a facility-based Crisis Stabilization & Assessment program.

More extended and extensive services are offered in Crisis Stabilization & Assessment programs which employ behavioral health professionals and peers to deliver a range of 24-hour services over the course of several days. These programs may be freestanding or co-located with another facility-based program, and the services they provide may include crisis stabilization with/without medication management, peer support, recovery/resiliency planning, an organized sobriety group, social and recreational activities, facilitated access to the next appropriate level of care, and information about community resources.

**Admission Criteria**

- See Common Criteria
- The factors leading to admission and/or the member’s history of treatment suggest that the member is likely to respond to rapid assessment and stabilization.
- The factors leading to admission require immediate assessment and intervention to determine if admission to an inpatient setting is warranted.

**Continuing Stay Criteria**

- See Common Criteria

**Discharge Criteria**

- See Common Criteria

**Clinical Best Practices**

- See Common Clinical Best Practices
- The focus of evaluation and treatment planning is to determine whether the member’s condition can be safely, efficiently, and effectively treated in an ambulatory setting, or whether the member should be admitted to an inpatient setting.
- The evaluation addresses the following:
  - Presenting concerns;
  - Urgent needs, including those related to the risk of harm to self, others, and/or property;
  - The history of crises, including:
    - Response to prior interventions;
    - Issues since last crisis stabilization;
  - Current living situation;
  - Availability of supports;
  - Current treatment;
  - Use of alcohol or drugs;
  - Co-occurring behavioral health or medical conditions.
- The treatment plan addresses the following:
  - The member’s urgent needs;
  - Immediate services needed to respond to the current crisis;
o How the member’s family and other natural resources will be involved in resolving the crisis when clinically indicated;

o How the member will be transitioned to other services.

**MENTAL HEALTH: DAY TREATMENT**

**Day Treatment:** A structured program most commonly found in state-funded benefit plans that maintains hours of service for at least 3 hours per day, at least 4 days per week. Day Treatment provides a combination of diagnostic, treatment, and rehabilitative procedures which, through supervised and planned activities and extensive interactions between the provider and the member, provides the services of the clinic treatment program, as well as social training, task and skill training and socialization activities. The purpose of services is to promote recovery through improved level of functioning, skill building, and disease management.

Day Treatment services are typically provided to members with more severe mental health conditions and related functional impairments as an alternative to services in a Residential Treatment Center or Inpatient, or as a transition from these services. Examples of at-risk members include children and adolescents with Serious Emotional Disturbance (SED)\(^2\), and adults with Serious Mental Illness (SMI)\(^3\).

The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

When supported by the benefit plan, coverage may be available for Day Treatment Program services that are coupled with overnight housing.

**Admission Criteria**

- See Common Criteria
- AND
- The member has a Serious Emotional Disturbance (SED) or Serious Mental Illness (SMI)
- AND
- Assessment and diagnosis and/or treatment planning requires observation and interaction for at least 3 hours per day, 4 days per week. Examples include:
  - Assessment requires frequent interaction with the member, and observation of the member with others.
  - The treatment plan must be changed frequently, which requires that the provider have face-to-face interactions with the member several times a week.

  **OR**

- The member requires engagement and support, which requires extended interaction between the member and the program. Examples include:
  - The member requires a coordinated transition back into the community after treatment in inpatient or a residential treatment center.
  - The member has been unable to access or utilize the member’s family or other natural resources on his or her own.

**OR**

---

\(^2\) According to Federal Register Volume 62, Number 193, Serious Emotional Disturbance (SED) occurs in persons from birth up to the age of 18, who currently or at any time during the past year, have had a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified with the DSM that resulted in functional impairment which substantially interferes with or limits the child’s role or functioning in family, school, or community activities.

\(^3\) According to Federal Register 58, Number 96, the definition of Serious Mental Illness (SMI) includes persons aged 18 or older who currently or at any time in the past year have had a diagnosable mental, behavioral, or emotional disorder (excluding developmental, dementias, mental disorders due to a medical condition and substance use disorders) of sufficient duration to meet diagnostic criteria specified within the DSM that has resulted in serious functional impairment, which substantially interferes with or limits one or more major life activities.
The member requires a structured environment to practice and enhance skills. This requires face-to-face interactions several times a week that cannot be provided in a less intensive setting. Examples of skills include those that help the member:
  - Maintain his or her current living situation;
  - Return to work or school.

OR

The member requires a structured environment to complete goals and develop a plan for post-discharge services in a less intensive setting. Examples of assistance include the following:
  - Assistance with developing the skills needed to self-manage medications;
  - Assistance with making progress towards goals in spite of an environment that does not support recovery and/or limited community support services.

Additional Criteria for Overnight Housing Coupled with a Day Treatment Program

- Overnight housing is covered by the benefit plan.
- The treatment setting is separate from the housing.
- Either of the following apply:
  - An unsupportive or high-risk living situation is undermining the member’s recovery;
  - Routine attendance at Day Treatment is hindered by a lack of transportation.

Continuing Stay Criteria

- See Common Criteria

Discharge Criteria

- See Common Criteria

Clinical Best Practices

- The psychiatrist and treatment team complete the initial evaluation commensurate with the member’s needs, no later than 24 hours following admission.
- During admission, a psychiatrist is available to consult with the program during and after normal business hours.
- A psychiatrist sees the member commensurate with the member’s needs, with no less than weekly visits.

**MENTAL HEALTH: INPATIENT**

*Inpatient:* A structured hospital-based program which provides 24-hour/7-day nursing care, medical monitoring, and physician availability; assessment and diagnostic services, active behavioral health treatment, and specialty medical consultation with an immediacy needed to avoid serious jeopardy to the health of the member or others.

The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

*Institutes for Mental Disease (IMD):* An institution for mental diseases such as a hospital, nursing facility or other institution of more than 16 beds that is primarily engaged in providing diagnosis, treatment, or care of persons with mental diseases, including medical attention, nursing care and related services. An IMD is a facility established and maintained primarily for the care and treatment of individuals with mental diseases.
**Children's Long Term Inpatient Program (CLIP):** CLIP is an inpatient program that provides inpatient care for children and youth who need extended inpatient mental health services. CLIP services are intended to promote discharge from inpatient care, maximize treatment benefits, minimize the risk of readmission and increase length of time in the community. Optum's CLIP liaison is the primary contact for the treatment team and will manage cases from preadmission through discharge. In the case of a CLIP admission from a Washington Tribal Authority, Optum’s liaison will work with the tribe during discharge planning to provide appropriate services to the member.

**Admission Criteria**

- See Common Criteria
- AND
- The member’s condition and/or the member’s history of response to treatment suggest that there is imminent or current risk of harm to self, others, and/or property which cannot be safely, efficiently, and effectively managed in a less intensive level of care. Examples include the following:
  - A life-threatening suicide attempt;
  - Self-mutilation, injury, or violence towards others or property;
  - Threat of serious harm to self or others;
  - Command hallucinations directing harm to self or others.
  - OR
- The member’s condition cannot be safely, efficiently, and effectively treated in a less intensive setting due to a physical complication. Examples include:
  - A physical cause for the member’s signs and symptoms cannot be ruled out in a less intensive setting.
  - A severe medication side effect requires the level of monitoring and intervention available in an inpatient setting.
  - OR
- The factors leading to admission cannot be safely, efficiently, and effectively assessed and/or treated in a less intensive setting due to changes in the member’s signs and symptoms, and/or psychosocial and environmental factors. Examples include:
  - Impairment of behavior or cognition that interferes with activities of daily living (ADLs) to the extent that the welfare of the member or others is endangered.
  - Psychosocial and environmental problems that threaten the member’s safety or undermines engagement in a less intensive level of care.
  - OR
- The factors which led to admission to Crisis Stabilization & Assessment or 23-Hour Observation cannot be addressed, and the member must be admitted to inpatient.
- For IMD, the member is either under the age of 21 or over the age of 65.
- For IMD the member meets all of the above criteria and will likely not need inpatient care for more than 15 days.
- For CLIP services, the member is under the age of 19 who is in foster care or in an out of home placement; and/or receiving services through a family-centered, community based coordinated care; or
- For CLIP services, it has been determined that the member may benefit from CLIP services after being court committed for involuntary treatment for 180 calendar days.
- For CLIP services, the member receives Rehabilitation Case Management throughout the CLIP stay in coordination with the treatment team.

**Continuing Stay Criteria**

- See Common Criteria
- AND
- Treatment is not primarily for the purpose of providing custodial care. Services are custodial when they are any of the following:
  - Non-health-related services, such as assistance with Activities of Daily Living (examples include feeding, dressing, bathing, transferring, and ambulating);
o Health-related services provided for the primary purpose of meeting the personal needs of the member or maintaining a level of function (even if the specific services are considered to be skilled services), as opposed to improving that function to an extent that might allow for a more independent existence;
o Services that do not require continued administration by trained medical personnel in order to be delivered safely and effectively.

- For CLIP services, the facility continuously considers less restrictive treatment options during the member’s stay.

**Discharge Criteria**

- See Common Criteria
- An IMD admission is not longer than 15 calendar days or less within the same calendar month.

**Clinical Best Practices**

- See Common Clinical Best Practices
- The psychiatrist, in conjunction with the treatment team, completes the initial evaluation within 24 hours of admission.
- During admission, the psychiatrist sees the member at least 5 times per week, and supervises and evaluates the treatment program to determine the extent to which treatment goals are being realized and whether changes in the treatment plan are needed.
- The first treatment appointment and medication management visit are scheduled to occur within a timeframe that is commensurate with the risk that the factors which led to admission will reoccur, but no later than 7 days from discharge.
- For CLIP, services include:
  - Ongoing assessment for discharge
  - Work toward admission into community mental health care
  - Integrated mental health treatment planning,
  - Resource identification
  - Linkage to mental health rehabilitative services; and
  - Development of individualized services that promote continuity of mental health care.

---

**MENTAL HEALTH: INTENSIVE OUTPATIENT PROGRAM**

**Intensive Outpatient Program:** A structured program that maintains hours of service for at least 9 hours per week for adults and 6 hours per week for children/adolescents during which assessment and diagnostic services, and active behavioral health treatment are provided to members who are experiencing moderate signs and symptoms that result in significant personal distress and/or significant psychosocial and environmental issues. The purpose of services is to monitor and maintain stability, decreasing moderate signs and symptoms, increase functioning, and assist members with integrating into community life.

The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

**Intensive Outpatient Programs** provide education, treatment, and the opportunity to practice new skills outside the program.

An **Intensive Outpatient Program** can be used to treat mental health conditions or can specialize in the treatment of co-occurring mental health and substance-related disorders.

When supported by the benefit plan, coverage may be available for **Intensive Outpatient Program services** that are coupled with overnight housing.

**Admission Criteria**

- See Common Criteria
• Assessment and diagnosis and/or treatment planning requires observation and interaction a minimum of 9 hours per week for adults and 6 hours per week for children/adolescents. Examples include the following:
  o Assessment requires frequent interaction with the member and observation of the member with others.
  o The treatment plan must be frequently changed, which requires that the provider have face-to-face interactions with the member several times a week.

OR
• The member requires engagement and support which requires extended interaction between the member and the program. Examples include:
  o The member requires a coordinated transition back into the community after treatment in inpatient or a residential treatment center.
  o The member has been unable to access or utilize the member’s family or other natural resources on his or her own.

OR
• The member requires a structured environment to practice and enhance skills. This requires face-to-face interactions several times a week that cannot be provided in a less intensive setting. Examples of skills include those that help the member:
  o Maintain their current living situation;
  o Return to work or school.

OR
• The member requires a structured environment to complete goals and develop a plan for post-discharge services in a less intensive setting. Examples of skills include those that help the member:
  o Assistance with developing the skills needed to self-manage medications;
  o Assistance with making progress toward goals in spite of an environment that does not support recovery and/or limited community support services.

Additional Criteria for Overnight Housing Coupled with an Intensive Outpatient Program
• Overnight housing is covered by the benefit plan.
  AND
• The treatment setting is separate from the housing.
  AND
• Either of the following apply:
  o An unsupportive or high-risk living situation is undermining the member’s recovery;
  o Routine attendance at an Intensive Outpatient Program is hindered by a lack of transportation.

Continuing Stay Criteria
• See Common Criteria

Discharge Criteria
• See Common Criteria

Clinical Best Practices
• See Common Clinical Best Practices
• The responsible provider and the treatment team complete the initial evaluation commensurate with the member’s needs, no later than 3 treatment days after admission.
• During admission, a psychiatrist is available to consult with the program during and after normal program hours.
**Outpatient:** Assessment and diagnosis and active behavioral health treatment that are provided in an ambulatory setting, via a secure two-way real time interactive telemental health system, or in the member’s home. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices. Individual outpatient psychotherapy is generally provided in sessions lasting up to 45 minutes.

The following are not considered telemental health because they don’t utilize a secure two-way real time interactive telemental health system:

- Phone-based services including phone counseling, email, texting, voicemail, or facsimile except when allowed by State regulation;
- Remote medical monitoring devices;
- Virtual reality devices;
- Internet-based services including internet-based phone calls.

Extended outpatient sessions are individual psychotherapy sessions with or without evaluation and management services lasting 60 minutes or longer (53+ minutes, per the CPT Time Rule). Extended outpatient sessions may require prior authorization before services are received, except in extenuating circumstances, such as a crisis.

Home-based assessment and treatment are separate services, and the findings of a home-based assessment may or may not support the need for home-based treatment.

**Admission Criteria**

- See Common Criteria

Coverage for extended outpatient sessions lasting longer than 60 minutes (53+ minutes, per the CPT Time Rule) may be indicated in the following non-routine circumstances:

  - The member is experiencing a crisis but is not at imminent risk of harm to self or others, and an extended outpatient session is appropriate for providing rapid and time-limited assessment and stabilization.
    - Consider extending coverage for crisis situations in 30-minute increments when clinically indicated.
    - Prior authorization is not required when there is a crisis.
  - An individual psychotherapy session with evaluation and management is being provided, and there is an unexpected complication resulting from pharmacotherapy, or a worsening of the member’s condition that would likely require a more intensive level of care if the outpatient session is not extended.
  - Periodic involvement of children, adolescent, or geriatric members’ family in a psychotherapy sessions when such involvement is essential to the member’s progress (e.g., when psychoeducation or parent management skills are provided).
    - This is not synonymous with marital or family therapy.
  - An extended session is otherwise needed to address new symptoms of the reemergence of old symptoms with a rapid, time-limited assessment and stabilization response. Without an extended outpatient session, the new-re-emerging symptoms are likely to worsen and require a more intensive level of care.

Extended outpatient sessions may be covered in the following circumstances, as indicated by the member’s condition and specific treatment needs:

- The member has been diagnosed with Posttraumatic Stress Disorder, Panic Disorder, Obsessive Compulsive Disorder, or Specific Phobia, and is being treated with Prolonged Exposure Therapy.
- The member is being treated with Eye Movement Desensitization and Reprocessing (EMDR) or Traumatic Incident Reduction (TIR) for Posttraumatic Stress Disorder (PTSD).
- Borderline Personality Disorder is a covered condition, and the member is being treated with Dialectical Behavior Therapy (DBT).

Home-Based outpatient assessment and/or treatment may be covered when the member is homebound. A member is homebound when:
• A physical condition restricts the member’s ability to leave his/her residence except with the aid of supportive devices such as crutches, canes, wheelchairs, and walkers; the use of special transportation; or the assistance of another person; or if leaving home is medically contraindicated.
• A behavioral health condition is manifested in part by an inability to leave home, or is such that it would not be considered safe for the member to leave home unattended.

Home-based outpatient assessment may be covered when:
• An assessment of the changes in the member’s signs and symptoms, and/or psychosocial and environmental factors is required to determine if behavioral health services are needed.
• An assessment of psychosocial and environmental factors conducted in an ambulatory setting was inconclusive.

Home-based outpatient treatment may be covered when:
• The member’s signs and symptoms are primarily or exclusively experienced at home.
• The member’s condition undermines participation in treatment at an ambulatory setting.

Coverage for outpatient telemental health service may be covered when:
• The Outpatient Admission Criteria are met.
  AND
• A secure two-way real time interactive telemental health system is available to facilitate interaction between the member and the provider.

Continuing Stay Criteria
• See Common Criteria

Discharge Criteria
• See Common Criteria

Clinical Best Practices
• See Common Clinical Best Practices
• The frequency and duration of outpatient visits allows for safe, efficient, and effective achievement of treatment goals, and supports the member's recovery and resiliency. Initially, the frequency of visits varies from weekly in routine cases to several times a week. As the member's functional status improves, the frequency of visits decreases to meet the member's current needs and treatment goals. Factors that may impact frequency and duration include the following:
  o The goals of treatment;
  o The member's preferences;
  o Evidence from clinical best practices which supports frequency and duration;
  o The need to monitor and manage imminent risk of harm to self, others, and/or property.
• The provider informs the member of the process to be followed in the event of an after-hours emergency, such as the availability of on-call services. The process is not solely reliant on the Emergency Room.

Additional best practices for home-based assessment and treatment are:
• The following conditions may support home-based assessment and/or treatment:
  o Agoraphobia or Panic Disorder;
  o Disorders of thought processes wherein the severity of delusions, hallucinations, agitation and/or impairments of thoughts/cognition grossly affect the member's judgment and decision making, and therefore the member's safety;
  o Depression with severe vegetative symptoms;
  o Behavioral health problems associated with medical problems that render the member homebound.

Additional best practices for telemental health are:
• Asynchronous store and forward technologies (i.e., the transmission of a member’s clinical record, lab results, or other clinical information from an originating site to the provider at a distant site) is not part of the standard of care for telemental health.
• The following are not considered telemental health because they don't utilize a secure two-way real time interactive telemental health system:
  o Phone-based services including phone counseling, email, texting, voicemail, or facsimile except when allowed by State regulation;
Remote monitoring devices;
Virtual reality devices;
Internet-based services including internet-based phone calls.

- A qualified provider at the distant site is licensed in the state where the member resides.
- Delivery of group or family psychotherapy to members at different locations (i.e., multipoint videoconferencing) may be covered when all members are in the state where the provider is licensed, and all locations provide secure two-way real time interactive telemental health systems.
- Services are delivered in a manner consistent with the Health Insurance Portability and Accountability Act (HIPAA) and other applicable privacy and security regulations and standards.

**MENTAL HEALTH: PARTIAL HOSPITAL PROGRAM**

**Partial Hospital Program:** A structured program that maintains hours of service for at least 20 hours per week during which assessment and diagnostic services, and active behavioral health treatment are provided to members who are experiencing serious signs and symptoms that result in significant personal distress and/or significant psychosocial and environmental issues. While a Partial Hospital Program generally maintains at least 20 hours of service per week, the frequency of weekly visits provided to a member may lessen as the member nears discharge in order to promote a safe and timely transition between levels of care.

Partial Hospital Programs provide education, treatment, and the opportunity to practice new skills outside the program.

The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

Partial Hospital Program can be used to treat mental health conditions or can specialize in the treatment of co-occurring mental health and substance-related disorders.

When supported by the benefit plan, coverage may be available for Partial Hospital Program services that coupled with overnight housing.

**Admission Criteria**

- See Common Criteria
  AND
- Assessment and diagnosis and/or treatment planning requires observation and interaction for at least 20 hours per week. Examples include the following:
  - Assessment requires frequent interaction with the member, and observation of the member with others.
  - The treatment plan must be changed frequently, which requires that the provider have face-to-face interactions with the members several times a week.
  OR
- The member requires engagement and support, which requires extended interaction between the member and the program. Examples include the following:
  - The member requires a coordinated transition back into the community after treatment in inpatient or a residential treatment center, such as engagement with wraparound services or natural resources.
  - The member has been unable to access or utilize family or other natural resources on his or her own.
  OR
- The member requires a structured environment to practice and enhance skills. This requires face-to-face interactions several times a week that cannot be provided in a less intensive setting. Examples of skills include those that help the member:
  - Maintain their current living situation;
  - Return to work or school.
  OR
- The member requires a structured environment to complete goals and develop a plan for post-discharge services in a less intensive setting. Examples of assistance include the following:
Additional Criteria for Overnight Housing Coupled with a Partial Hospital Program

- Overnight housing is covered by the benefit plan.  
  AND
- The treatment setting is separate from the housing.  
  AND
- Either of the following apply:  
  - An unsupportive or high-risk living situation is undermining the member’s recovery;  
  - Routine attendance at a Partial Hospital Program is hindered by a lack of transportation.

Continuing Stay Criteria
- See Common Criteria

Discharge Criteria
- See Common Criteria

Clinical Best Practices
- See Common Clinical Best Practices
- The psychiatrist and treatment team complete the initial evaluation commensurate with the member’s needs, no later than 24 hours following admission.
- During admission, a psychiatrist is available to consult with the program during and after normal business hours.
- A psychiatrist sees the member commensurate with the member’s needs, with no less than weekly visits.
- The frequency of weekly visits provided to a member may lessen as the member nears discharge in order to promote a safe and timely transition between levels of care.

RESIDENTIAL TREATMENT FACILITY A specialized form of rehabilitation service (non-hospital/non IMD) that offers a sub-acute psychiatric management environment. Individuals receiving this service present with severe impairment in psychosocial functioning or have apparent mental illness symptoms with an unclear etiology due to their mental illness. Treatment for these individuals cannot be safely provided in a less restrictive environment and they do not meet hospital admission criteria. Individuals receiving this service present with severe impairment in psychosocial functioning or have apparent mental illness symptoms with an unclear etiology due to their mental illness. Treatment for these individuals cannot be safely provided in a less restrictive environment and they do not meet hospital admission criteria. Individuals in this service require a different level of service than High Intensity Treatment.

Therapeutic interventions both in individual and group format may include medication management and monitoring, stabilization, and cognitive and behavioral interventions designed with the intent to stabilize the individual and return him/her to more independent and less restrictive treatment. The treatment is not for the purpose of providing custodial care or respite for the family, nor is it for the sole purpose of increasing social activity or used as a substitute for other community-based resources.

Treatment and rehabilitation services are provided a minimum of 8 hours per day. There are two levels of Residential Treatment Facility. Short-term residential is typically treatment at this level provided for less than 30 days while long-term residential is treatment provided at this level typically longer than 30 days.

Admission Criteria
- All of the following criteria must be met to satisfy the criteria for admission into residential treatment:
The individual must meet Medical Necessity and Access to Care standards.

The person is experiencing behavioral problems in the home or community and is not able to be supported outside of a highly structured 24-hour therapeutic environment.

The individual requires supervision seven days per week for 24 hours per day to develop skills necessary for activities of daily living, to assist with planning and arranging access to a range of educational, vocational, therapeutic, and aftercare services, and to develop the adaptive and functional behavior that will allow him/her to live outside of a residential treating setting.

The individual is able to participate in therapeutic activities as outlined in his/her treatment plan with targeted goals. Active treatment with the services available at this level of care can reasonably be expected to improve the person’s behavioral condition in order to achieve discharge from this setting at the earliest possible time, and to facilitate return to outpatient care and community living.

The individual is not at imminent risk of serious harm to self or others.

Acute inpatient treatment is not required, is inappropriate, or the individual is unlikely to benefit from it based on a history of recent failure of treatment(s).

The individual is medically stable and does not require the 24 hour medical/nursing monitoring or procedures provided in an acute inpatient setting.

There is evidence that the individual has agreed to this level of treatment.

The individual does not meet criteria for a lower level of care such as a Congregate Care Facility or an independent living situation.

The RTF is not to be used primarily and therefore clinically appropriately as:

- A behavioral health intervention when other less restrictive alternatives such as Congregate Care or outpatient services are available that meets the person’s needs.
- An alternative to preventative incarceration, or as a means to ensure community safety in an adult exhibiting primarily antisocial behavior.
- The equivalent of safe housing or permanency placement. A lack of available outpatient services is not, in and of itself, the sole criterion for admission to residential treatment.

Continuing Stay Criteria

- See Common Continuing Stay Criteria.
- All of the following criteria must be met to satisfy the criteria for continued stay:
  - There is evidence that the treatment plan for the person is focused on psychosocial rehabilitative training;
  - There is evidence that the current or revised treatment plan can be reasonably expected to bring about significant results in the individual’s progress toward meeting the targeted treatment goal(s) and this is documented in weekly progress notes;
  - Despite reasonable therapeutic efforts, clinical evidence indicates that the disposition planning and/or attempts at therapeutic re-entry into the community have resulted in, or would result in exacerbation of the psychiatric illness to the degree that would necessitate continued residential treatment;

---

4. The individual has a mental illness as determined by a mental health professional in a face-to-face intake/assessment. The diagnosis must be included in the list of Mental Health Covered Diagnoses;
2. The individual’s impairment(s) and corresponding need(s) must be the result of a mental illness. The individual must meet the Functional Criteria for Serious Mental Illness (SMI) or Seriously Emotionally Disturbed (SED);
3. The intervention is deemed to be reasonably necessary to improve, stabilize, or prevent deterioration of functioning resulting from the presence of a mental illness;
4. The individual is expected to benefit from the intervention; and
5. The individual’s unmet need(s) cannot be more appropriately met by any other formal or informal system or support.
There is evidence that the individual is actively participating in treatments/skill building activities – up to 8 hours a day;

There is evidence that attempts are being made to secure timely access to treatment resources and housing in anticipation of discharge, with alternative housing contingency plans also being addressed.

Discharge Criteria

- See Common Discharge Criteria.
- The person no longer needs this level of care because:
  - The individual's treatment plan goals identified at admission specific to this level of care have been accomplished;
  - Or, the individual is not making progress toward treatment goals and there is no reasonable expectation of progress at this level of care.

Clinical Best Practices

- See Common Clinical Best Practices.

**WRAPAROUND SERVICES WITH INTENSIVE SERVICES (WISE)**

**WISE** is designed to provide comprehensive behavioral health services and supports to members and their families up to 21 years of age with complex behavioral health needs. The goal of WISE is for the member to live and thrive in their home and community, as well as to avoid or reduce disruptive out-of-home placements.

The core elements of WISE include each of the following phases:

- Engagement
- Assessing
- Teaming
- Service Planning and Implementation
- Monitoring and Adapting
- Transition

WISE services are intensive or direct services provided in home and community settings. Intensive services (“direct services”) provided in home and community-based settings. They are individualized, strength-based interventions designed to correct or ameliorate mental health conditions that interfere with a youth’s functioning, or provided in order to maintain or restore functioning. Interventions are aimed at promoting health and wellness and helping the youth build skills necessary for successful functioning in the home and community and improving the family’s ability to help the youth successfully function in the home and community.

Direct services are delivered according to an Individualized Service Plan, coordinated with the Cross System Care Plan to deliver integrated Wraparound with Intensive Services. The CFT develops goals and objectives for all life domains in which the youth’s mental health condition produces impaired functioning (including family life, community life, education, vocation, and independent living) and identifies the specific interventions that will be implemented to meet those goals and objectives. The goals and objectives seek to maximize the youth’s ability to live and participate in the community and to function independently by building social, communication, behavioral, and basic living skills. WISE Practitioners should engage the youth in home and community activities where the youth has an opportunity to work towards identified goals and objectives in a natural setting. Phone contact and consultation may be provided as part of the service.

**Admission Criteria**

- See Common Criteria; and
- The member is under the age of 21 and has complex behavioral healthcare needs that may include:
  - Involvement in multiple child-serving systems (e.g., child welfare, mental health, juvenile justice, developmental disabilities, special education, substance use disorder treatment).
More restrictive services have been requested, such as psychiatric hospitalizations, residential placement or foster care placement, due to mental/behavioral health challenges.

- Risk of school failure and/or who have experienced significant and repeated disciplinary issues at school due to mental/behavioral health challenges.
- Significantly impacted by childhood or adolescent trauma.
- Prescribed multiple or high dosages of psychotropic medications for mental/behavioral health challenges.
- History of detentions, arrests, or other referrals to law enforcement due to behaviors that result from mental/behavioral health challenges.
- Risk factors such as suicidal ideation, danger to self or others, behaviors due to mental/behavioral health challenges.
- Family requests support in meeting the youth’s mental/behavioral health challenges.

**Continuing Stay Criteria**

- See Common Criteria; and

**Discharge Criteria**

- See Common Criteria

**Clinical Best Practices**

- See Common Clinical Best Practices

**WISe Screening**

- A WISe screen must be offered within 10 business days of receiving a referral.
- All WISe screens include:
  
  - Information gathering that utilizes the information provided by the referent (i.e. the youth, a family member, a system partner, and/or an informal or natural support). Additional information may be gathered from the youth and family directly and others who have been involved with the family (including extended family and natural supports) and/or its service delivery.
  
  - Completion of the Child Adolescent Needs and Strengths (CANS) Screen, which consists of a subset of 26 questions, pulled out the full CANS assessment. The CANS screen must be completed by a CANS-certified screener.
  
  - Entering the CANS Screen into the Behavioral Health Assessment System (BHAS) which will apply the CANS algorithm to determine whether the youth would benefit from WISe.
  
  - All youth who meet the CANS algorithm and the MCE’s qualifying criteria will be determined to meet WISe level of care. If a youth does not meet the CANs algorithm, clinical judgment may be used to continue with a referral to WISe.

- Once the member has been screened into WISe, engagement includes steps to:
  
  - To lay the groundwork for trust and shared vision among the youth, family and WISe team.
  
  - To establish rapport and build commitment to WISe process through warmth, optimism, humor, and identification of strengths.
  
  - The WISe Practitioner(s) meet with the youth and family to explain the WISe process, and how it differs from traditional care.
  
  - The WISe Practitioner(s) obtains consent for services.
  
  - The WISe Practitioner(s) discuss with the youth and family the events, circumstances, and moments that brought the youth and family to WISe.
  
  - The WISe Practitioner(s) obtain the youth and family perspective on where they are presently (including listening for both their expressed needs and strengths), and where they would like to go in the future.
The WISE Practitioner(s) discuss the youth’s and family’s view of crises, and develops a written plan to stabilize dangerous or harmful situations immediately.

- The WISE Practitioner(s) ensure the youth and family understand any system mandates (if applicable) and ethical issues.

**WISE Assessing**

- The WISE Practitioner(s) complete a strengths discovery and a list of strengths for all family members.
- The WISE Practitioner(s) discuss and lists existing and potential natural supports.
- The WISE Practitioner(s) complete a list of potential team members.
- The WISE Practitioner(s) summarize the youth and family context, strengths, needs, vision for the future, and supports.
- The WISE Practitioner(s) determine with the youth and family how the CANS information will be provided to the team.

**WISE Teaming**

- The WISE Practitioner(s) explain WISE to potential team members, eliciting their perspectives, and working to get their commitment to participate in the team process.
- The WISE Practitioner(s) invite potential team members to join the team process.
- The WISE Practitioner(s) partner and orient team members to the WISE process and team meeting structure.
- The CFT members help to create the team meeting agenda, provide input about the meeting logistics and provide comfort for youth and family.
- The CFT will include the youth, parents/caregivers (see definitions in Appendix B), relevant family members, and natural and community supports.
- The CFT will be expected to meet with sufficient regularity (every 30 calendar days, at a minimum), as indicated in the CSCP, to monitor and promote progress on goals and maintain clear and coordinated communication.
- The CFT reviews the interventions and action items and adjusts these accordingly, using the outcomes/indicators associated with each priority need, included in the CSCP. A WISE Practitioner guides the team in evaluating whether selected strategies are promoting improved health and wellness for the youth and successfully assisting in meeting the youth and family’s identified needs.
- The CFT works together to resolve differences regarding service recommendations, with particular attention to the preferences of the youth and family
- The CFT has a process to resolve disputes and arrive at a mutually agreed upon approach for moving forward with services.
- The WISE Practitioner(s) are expected to check in with team members on progress made on assigned tasks between meetings.
- The WISE Practitioner(s) set a time, date and location for the team meeting that is convenient to the youth and family.

**Service Planning and Implementation**

- The WISE Practitioner(s) meet with the youth and family and develops a list of possible needs of the family prior to the team meeting, based on the results of the CANS assessment.
- The WISE Practitioner(s) convene one or more team meetings to discuss and obtain agreement on the elements of the CSCP.
- In the CFT meeting, the youth and family’s vision for their future is presented.
- The CFT discusses and sets ground rules to guide the meetings.
- The CFT reviews and expands the list of strengths for the youth and family.
- The CFT creates a mission that details a collaborative goal describing what needs to happen prior to transition from WISE.
- The CFT reviews the list of needs and agrees which to prioritize in the CSCP, respecting and including the preferences and priorities of the youth and family.
- The CFT determines the intended outcomes that will transpire when the needs are met.
- The CFT brainstorms an array of strategies to meet these needs, and then prioritizes strategies for each need, including the use of natural supports and intensive services.
- CFT members agree upon assignments, or action steps, around implementing the strategies.
- The CFT evaluates the crisis plan and adapts as necessary.
• The work of the team is documented, and distributed among team members.

Monitoring and Adapting
• The CFT continues to meet at a minimum of every 30 calendar days to evaluate progress towards meeting needs and the effectiveness of indicated strategies.
• The CFT adjusts strategies to meet changes in the needs and outcomes. The team adds, subtracts and modifies strategies to create the most effective mix of services and supports.
• The CFT evaluates whether there is progress towards the designated outcomes. The team adjusts the strategies to guide next steps.
• The CFT adds members, as necessary and appropriate, and strives to create a mix of formal, informal, and natural supports.
• The CFT celebrates successes and adds to strengths as they are identified.
• Full CANS assessments are administered and entered into BHAS every 90 days to help track progress, and to catch emerging needs and make changes to the plan as necessary.
• The WISE Practitioner(s) maintain ongoing communication outside of the team meetings to best monitor “buy-in”, and to ensure that all members’ perspectives are heard.

Direct Services and Settings
• Direct services include, but are not limited to:
  o Educating the youth’s family about the mental health challenges the youth is experiencing, and how to effectively support the youth.
  o In-home functional behavioral assessment.
  o Behavior management, including developing and implementing a behavioral plan with positive behavioral supports, modeling for the youth’s family and others how to implement behavioral strategies, and in-home behavioral aides who assist in implementing the behavior plan, monitor its effectiveness, and report on the plan’s effectiveness to clinical professionals.
  o Therapeutic services delivered in the youth’s home or community including, but not limited to, therapeutic interventions such as individual and/or family therapy and evidence-based practices (e.g., Trauma-Focused Cognitive Behavioral Therapy, Multi-Systemic Therapy, Family Functional Therapy, etc.). These services are designed to:
    • Improve self-care, by addressing behaviors and social skills deficits that interfere with daily living tasks and to avoid exploitation by others.
    • Improve self-management of symptoms including self-administration of medications.
    • Improve social functioning by addressing social skills deficits and anger management.
    • Reduce negative effects of past trauma, using evidence-based approaches.
    • Reduce negative impact of mental health disorders, such as depression and anxiety, through use of evidence-based approaches
    • Support the development and maintenance of social support networks and the use of community resources.
    • Support employment objectives by identifying and addressing behaviors that interfere with seeking and maintaining a job.
    • Support educational objectives through identifying and addressing behaviors that interfere with succeeding in an academic program in the community.
    • Support independent living objectives, by identifying and addressing behaviors that interfere with seeking and maintaining housing and living independently.
• Direct services will be provided in any setting where the youth is naturally located, including the home, schools, recreational settings, childcare centers, and other community settings wherever and whenever needed, including in evenings and on weekends.

WRAPAROUND SERVICES: ASSERTIVE COMMUNITY TREATMENT

Assertive Community Treatment (a.k.a. Program of Assertive Community Treatment, PACT, ACT): An intensive community-based program that uses a multi-disciplinary team of behavioral health professionals and trained peers to provide or coordinate treatment, rehabilitation, and community support services for members who are recovering from severe mental health conditions.
The course of treatment is focused on addressing the member’s condition to the point that the
member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or
no longer requires treatment. The member’s condition includes consideration of the acute and chronic
symptoms in the member’s history and presentation, including co-occurring behavioral health or
medical conditions, informed by information collected by the provider following evaluation and
treatment planning as described in Common Clinical Best Practices.

Assertive Community Treatment services may be mobile or delivered within an outpatient treatment
setting, and are available 24 hours a day, 7 days a week.

Assertive Community Treatment services vary in intensity, frequency, and duration in order to support
the member’s ability to utilize behavioral health and medical services, manage functional difficulties,
or otherwise realize recovery and resiliency goals.

Admission Criteria

- See Common Criteria
- AND
- The member’s condition indicates indicate that the member requires assistance with accessing
treatment and/or community resources. Examples include:
  - The member primarily relies on the emergency room for behavioral health services.
  - Impairment of behavior or cognition interferes with Activities of Daily Living (ADLs) to the
    extent that the member requires significant support or assistance.

Continuing Stay Criteria

- See Common Criteria

Discharge Criteria

- See Common Criteria

Clinical Best Practices

- See Common Clinical Best Practices
- The Assertive Community Treatment team is coordinated by a responsible behavioral health
  provider who:
  - Has knowledge and competencies that meet the member’s needs;
  - AND
  - Provides clinical supervision of the Assertive Community Treatment team.
- The Assertive Community Treatment team includes a psychiatrist who:
  - Provides assessment and treatment services;
  - AND
  - Participates in team meetings;
  - AND
  - Provides clinical supervision and case consultation.
- The responsible provider, in conjunction with the Assertive Community Treatment team,
  completes the initial evaluation within 24 hours of admission.
  - The focus of the initial evaluation is on the member’s mental and functional status, the
    effectiveness of past treatment, and the member’s current needs for treatment,
    rehabilitation, and support services.
  - The initial evaluation guides services until the comprehensive assessment and Assertive
    Community Treatment plan are completed.
- The responsible provider, in conjunction with the Assertive Community Treatment team,
  completes a comprehensive assessment without one month of admission.
  - The comprehensive assessment builds on information obtained during the initial
    assessment, and is used to develop the Assertive Community Treatment plan.
- The responsible provider, in conjunction with the Assertive Community Treatment team, and
  whenever possible, the member, develops a multidisciplinary service plan that addresses the
  following:
  - Behavioral health illness or symptom reduction;
  - Housing;
  - Activities of Daily Living (ADLs);
  - Daily structure and employment;
Family and social relationships.

- The service plan includes a crisis intervention plan.
- The Assertive Community Treatment team provides services such as the following to the member’s family, with the member’s consent:
  - Education about the member’s condition and its treatment;
  - Education about the member’s strengths;
  - Education about the family’s role in the member’s treatment;
  - Assistance with resolving conflicts;
  - Interventions aimed at promoting the family’s collaboration with the ACT team.
- On average, the member is seen 3 times per week. The Assertive Community Treatment team has the capacity to see the member more frequently. Reasons for more frequent contact may include:
  - The member’s signs and symptoms have worsened;
  - The member’s response to a new medication needs to be monitored;
  - The member is experiencing a serious life event.
- The Assertive Community Treatment team psychiatrist assesses the member’s signs and symptoms, prescribes appropriate medication, and monitors the member’s response to the medication.
- The Assertive Community Treatment team provides ongoing support and liaison services for members who are hospitalized or incarcerated.
- The Assertive Community Treatment team reaches out and maintains contact with the member when the member becomes isolated or is admitted to a higher level of care.
- The Assertive Community Treatment team conducts regularly scheduled planning meetings. The purpose of planning meetings is to:
  - Ensure that staff remain familiar with each member’s Assertive Community Treatment plan;
  - Provide an opportunity to assess the member’s progress and reformulate the Assertive Community Treatment plan as needed;
  - To problem-solve treatment issues;
  - To obtain input from the member, and incorporate the member into decisions about the Assertive Community Treatment plan.
- The service plan is reviewed and modified as necessary commensurate with the member’s needs, or no less than quarterly.

WRAPAROUND SERVICES: CASE MANAGEMENT

Case Management: A community-based program in which a behavioral health professional or trained peer assists members who are at risk of being underserved in their efforts to identify, access, and utilize medical, behavioral health, or social services, or to otherwise achieve recovery and resiliency goals. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

Targeted Case Management is a form of case management services provided only to specific classes of members, or to members who reside in specified areas.

Case Management may be mobile or delivered in an outpatient treatment setting.

Case Management services vary in intensity, frequency, and duration in order to support the member’s ability to utilize behavioral health and medical services, manage functional difficulties, or otherwise realize recovery and resiliency goals.

Admission Criteria

- See Common Criteria

  AND

- The member’s condition indicates that the member requires assistance with accessing treatment and/or community resources. Examples include:
  - The member requires assistance with navigating the system of care.
  - The member requires assistance with accessing transportation services, employment services, childcare, or other community resources.
Continuing Stay Criteria

- See Common Criteria

Discharge Criteria

- See Common Criteria

Clinical Best Practices

- See Common Clinical Best Practices
- The responsible Case Manager, in conjunction with the treatment team, completes an initial evaluation of the member’s case management needs upon admission.
- The responsible Case Manager, in conjunction with the treatment team and, whenever possible, the member, develops a service plan that includes a description of the following:
  - The member’s recovery and resiliency goals;
  - Strengths;
  - Problems;
  - Specific and measurable goals for each problem;
  - Interventions that will support the member in meeting the goals.
- The service plan may be informed by the findings of the initial clinical evaluation.
- With the member’s permission, the Case Manager advocates for the member by sharing feedback about the member’s experience with the treatment provider, as well as agencies or other programs with which the member is involved.

WRAPAROUND SERVICES: FAMILY PEER SERVICES AND SUPPORTS

Family Peer Services and Supports: Family Peer Services and Supports provides families and other caregivers with support, information, and the opportunity to develop skills in support of a member’s recovery and resiliency. While providing these services, the family peer utilizes his/her training, lived experience and experiential knowledge to reduce the likelihood that the family and member will become isolated, disempowered, or disengaged. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

Family Peer Services and Supports complement the member’s behavioral health treatment, and may be delivered while the member is in treatment or in advance of the start of treatment.

Family Peer Services and Supports vary in intensity, frequency, and duration in accordance with the member’s family and member’s ability to utilize behavioral health services, manage psychosocial challenges, or otherwise make progress in achieving the member’s recovery and resiliency goals.

Admission Criteria

- See Common Criteria
  AND
- The member has a Serious Emotional Disturbance (SED) or a Substance-Related Disorder.
  AND
- The member’s condition indicates that the member’s family and member require assistance with accessing treatment and/or community resources. Examples include:
  - The member’s family requires information about the member’s behavioral health condition, evidence-based treatment, approaches to self-care, or community resources.
  - The member’s family could benefit from learning skills related to problem-solving, communication, managing crises or stress, supporting and engaging the child’s activation and self-care, or promoting recovery and resiliency.
    - The member’s family requires assistance navigating the system of care.
  AND
- The member is receiving behavioral health services, or is likely to engage in treatment with the provision of Family Peer Services and Supports.

Continuing Stay Criteria
• See Common Criteria

**Discharge Criteria**
• See Common Criteria

**Clinical Best Practices**
• See Common Clinical Best Practices
• The family peer completes an evaluation of the family’s needs upon referral.
  o For members who are transitioning from Inpatient or Residential Treatment, the family peer contacts the member’s family prior to discharge or within 24 hours of referral.
• As part of the evaluation, the family peer provides the member’s family with information about Family Peer Services and Supports, and verifies that the member’s family wants these services.
  o In the event that the member’s family declines services, the family peer provides information about obtaining services should the family’s needs change.
• The family peer, in conjunction with the member’s family, develops a service plan that addresses the following:
  o The member’s resiliency goals;
  o The member and family’s strengths;
  o The member and family’s educational needs;
  o The member and family’s self-care needs and resources;
  o Problems;
  o Specific and measurable goals for each problem;
  o Interventions that will support the member’s family and member in meeting the goals.
• The service plan may be informed by the findings of the member’s clinical evaluation.

**WRAPAROUND SERVICES: PEER SERVICES AND SUPPORTS**

**Peer Services and Supports:** Peer Services and Supports provides members with support, information, and the opportunity to develop skills in support of the member’s recovery. While providing these services, the Peer utilizes his/her training, lived experience, and experiential knowledge to reduce the likelihood that the member will become isolated, disempowered, or disengaged. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

Peer Services and Supports complement the member’s behavioral health treatment, and may be delivered while the member is in treatment or in advance of the start of treatment.

Peer Services and Supports vary in intensity, frequency, and duration in accordance with the member’s ability to utilize behavioral health services, manage psychosocial challenges, or otherwise make progress in achieving the member’s recovery goals.

**Admission Criteria**
• See Common Criteria
  AND
• The member has a Serious Mental Illness (SMI) or a Substance-Related Disorder
  AND
• The member’s condition indicates that the member requires assistance with accessing treatment and/or community resources. Examples include:
  o The member requires information about their behavioral health condition, evidence-based treatment, approaches to self-care, or community resources;
  o The member could benefit from learning skills related to problem-solving, communication, managing crises or stress, activating and engaging in self-care, or promoting recovery;
  o The member requires assistance navigating the system of care.
  AND
• The member is receiving behavioral health services, or is likely to engage in treatment with the provision of Peer Services and Supports.
Continuing Stay Criteria

- See Common Criteria

Discharge Criteria

- See Common Criteria

Clinical Best Practices

- See Common Clinical Best Practices
- The Peer completes an evaluation of the family’s needs upon referral.
  - For members who are transitioning from inpatient or residential treatment, the Peer contacts the member’s family prior to discharge or within 24 hours of referral.
- As part of the evaluation, the Peer provides the member with information about Peer Services and Supports, and verifies that the member wants these services.
  - In the event that the member declines services, the Peer provides information about obtaining services should the family’s needs change.
- The Peer, in conjunction with the member’s family, develops a service plan that addresses the following:
  - The member’s recovery and resiliency goals;
  - The member’s strengths;
  - The member’s educational needs;
  - The member’s self-care and activation strategies;
  - Problems;
  - Specific and measurable goals for each problem;
  - Interventions that will support the member in meeting the goals.
- The service plan may be informed by the findings of the member’s clinical evaluation.

Psychosocial Rehabilitation: A program that promotes recovery, full community integration, and improved quality of life for members who have been diagnosed with a behavioral health condition that seriously impairs their ability to lead meaningful lives. Interventions aim to help members develop skills and access resources needed to increase their capacity to succeed in their living, working, learning, and social environments. Interventions are collaborative, person-directed, individualized, and based on the member’s capacity for recovery. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

Psychosocial Rehabilitation is provided in conjunction with traditional pharmacologic and psychosocial treatments.

Psychosocial Rehabilitation services vary in intensity, frequency, and duration in order to support the member’s ability to manage functional difficulties and realize recovery and resiliency goals.

Admission Criteria

- See Common Criteria
  AND
- The member’s condition indicates that the member requires assistance with accessing treatment and/or community resources. Examples include:
  - The member has difficult gaining and utilizing necessary functional skills, such as those related to:
    - Education or work;
    - Finances;
    - Housing;
    - Health/medical;
    - Social needs;
    - Basic living skills;
- Legal needs.

**Continuing Stay Criteria**
- See Common Criteria

**Discharge Criteria**
- See Common Criteria
- The discharge plan:
  - Identifies the member’s progress meeting their rehabilitation goal(s);
  - Identifies the plan for services and supports needed to further assist the member with community integration, recovery, and realizing a higher quality of life;
- Includes information on the continuity of the member’s medications.

**Clinical Best Practices**
- See Common Clinical Best Practices
- Services are organized around:
  - The member’s stated goals;
  - The member’s preferences;
  - The identified needs of the member;
  - Improving the member's ability to understand their needs;
  - Assisting the member with achieving goal, such as:
    - Community living skills, including food planning and preparation, money management, maintenance of living environment, etc.;
    - Interpersonal relations;
    - Recreation or use of leisure time activities;
    - Vocational development or employment;
    - Educational development;
    - Self-advocacy;
    - Access to non-disability related social resources.
- The responsible provider, in conjunction with the rehabilitation team, completes the initial evaluation of the following within 24 hours of admission:
  - Factors leading the member to access services;
  - Assessment of harm to self, others, and/or property;
  - The member’s readiness for rehabilitation;
  - The member’s overall rehabilitation goal(s);
  - The member’s functional skills and knowledge in relation to the overall rehabilitation goal(s);
  - The member’s resources in relation to the overall rehabilitation goal(s).
- The responsible provider, in conjunction with the rehabilitation team and whenever possible, the member, develops a multidisciplinary rehabilitation plan that focuses on the following:
  - The member’s rehabilitation goal(s);
  - The member’s present level of skills and knowledge relative to the rehabilitation goal(s);
  - The skills and knowledge needed to achieve the member’s rehabilitation goal(s);
  - The member’s present resources and the resources needed to achieve the member’s rehabilitation goal.
- The rehabilitation plan includes specific and measurable objectives aimed at assisting the member with achieving the rehabilitation goal(s), and interventions for each skill, knowledge, or resource objective.
- The rehabilitation plan may be informed by the findings of the initial clinical evaluation.
- When the initial assessment identifies a potential risk of harm to self, others, and/or property, a personal safety plan is completed that includes:
  - Triggers;
  - Current coping skills;
  - Warning signs;
  - Preferred interventions;
  - Advance directives, when available.
- The program provides an effective system for reaching out to members who are not attending, becoming isolated, or who are hospitalized.
Respite Care: Respite Care is a temporary care that is intermittently provided to members with a Serious Mental Illness (SMI) or a Serious Emotional Disturbance (SED) when the family/caregiver requires a temporary break from caregiving, when members are at risk for abuse or neglect, or when members need additional support following a crisis. Respite Care can include assistance with Activities of Daily Living (ADLs), reinforcing life skills, or otherwise supporting the member’s recovery and resiliency goals. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices. Respite Care can include assistance with Activities of Daily Living, reinforcing life skills, or otherwise supporting the member’s recovery and resiliency goals.

Respite Care is provided in the member’s home, or in a community-based setting, such as a day care center. The duration of Respite Care also varies, and may include an overnight stay.

Admission Criteria
- See Common Criteria
- The member’s condition indicates that the member’s family or caregiver requires a temporary break from caregiving. Examples include:
  - The stress of caregiving has put the member at imminent risk of abuse or neglect.
  - Other responsibilities temporarily prevent the member’s family or caregiver from assisting the member with Activities of Daily Living (ADLs).

Continuing Stay Criteria
- See Common Criteria

Discharge Criteria
- See Common Criteria

Clinical Best Practices
- See Common Clinical Best Practices
- The responsible provider evaluates the member and caregiver’s need upon admission.
- The responsible provider, in conjunction with the member and/or member’s family or caregiver, develops a service plan that includes the following:
  - The goal(s) of Respite Care;
  - Specific, measurable objectives aimed at achieving the goal(s) of Respite Care.
- The service plan incorporates instructions for medical care, special needs and emergencies.
- The service plan also addresses the need for other services and resources that become apparent during the provision of Respite Care. As needed, the provider assists the member with accessing other services and resources.
- The service plan may be informed by the findings of the initial clinical evaluation.
- The provider ensures that necessary medication, medical equipment, and assistive technology accompany the member when Respite Care is provided at a site other than the member’s residence.

Sober Living Arrangements: Sober Living Arrangements (a.k.a. Drug-Free Housing, Alcohol/Drug Halfway House) are transitional, supervised living arrangements that provide stable and safe housing, an alcohol/drug-free environment, and support for recovery from alcohol or drug use. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.
Sober Living Arrangements vary in intensity and duration in order to support the member’s ability to utilize behavioral health services, manage functional difficulties, and otherwise realize recovery goals.

Admission Criteria

- See Common Criteria
- AND
- There is no risk of withdrawal, or the signs and symptoms of withdrawal can be safely managed.
- AND
- The member’s condition indicates that the member’s recovery from alcohol or drug use requires the structure and support available in a Sober Living Arrangement. Examples include:
  - The member’s environment doesn’t support recovery to the extent that the member is at risk of relapse.
  - The member is isolated and needs the structure and support available in a Sober Living Arrangement to practice relapse prevention.

Continuing Stay Criteria

- See Common Criteria

Discharge Criteria

- See Common Criteria

Clinical Best Practices

- See Common Clinical Best Practices
- The responsible staff member evaluates the member’s needs upon admission.
- The responsible staff member and the member develop a service plan that includes the following:
  - The goal of the Sober Living Arrangement; and
  - Specific, measurable objectives aimed at achieving the goal(s) of the Sober Living Arrangement.
- The responsible staff member provides the members with information about:
  - Accessing community resources;
  - Accessing emergency care;
  - Dealing with onsite safety issues, including:
    - Environmental risks;
    - Abuse or neglect;
    - Self-protection;
    - Medication management;
  - Guidelines related to guests.
- The responsible staff member ensures that the following are provided:
  - Regular meetings with staff;
  - Opportunities to improve Activities of Daily Living (ADLs);
  - Linkages with behavioral health and medical services.
- The service plan may be informed by the findings of the initial clinical evaluation.

Supervised Living Arrangements: Supervised Living Arrangements are residences such as transitional living facilities, group homes, and supervised apartments that provide a member with a Serious Mental Illness (SMI) with stable and safe housing, 24-hour supervision, the opportunity to learn how to manage Activities of Daily Living (ADLs), and support for the member’s broader recovery and resiliency goals. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

Supervised Living Arrangements vary in the amount of available staff, the intensity of recovery and resiliency-related services, and the length of residence.
Admission Criteria

- See Common Criteria
- The member has a Serious Mental Illness (SMI)
- The member’s condition indicates that the member is unable to maintain tenure in the community without the structure and support available in a Supervised Living Arrangement. Examples include:
  - The member is unable to maintain a safe living environment or sustained housing to the extent that the member is at risk for admission.
  - The member requires a transitional period of supervised living after discharge from inpatient or residential treatment.

Continuing Stay Criteria

- See Common Criteria

Discharge Criteria

- See Common Criteria

Clinical Best Practices

- See Common Clinical Best Practices
- The responsible staff member evaluates the member’s needs upon admission.
- The responsible staff member and the member develop a service plan that includes the following:
  - The goal(s) of the Supervised Living Arrangement; and
  - Specific, measurable objectives aimed at achieving the goal(s) of the Supervised Living Arrangement.
- The responsible staff member provides the member with information about:
  - Accessing community resources;
  - Accessing emergency care;
  - Dealing with onsite safety issues, including:
    - Environmental risks;
    - Abuse or neglect;
    - Self-protection;
    - Medication management;
  - Guidelines related to guests.
- The responsible staff member ensures that the following are provided:
  - Regular meetings with staff;
  - Opportunities to improve Activities of Daily Living (ADLs);
  - Linkages with behavioral health and medical services.
- The service plan may be informed by the findings of the initial clinical evaluation.

**Therapeutic Foster Care:** Therapeutic Foster Care provides a structured home environment in which specifically trained foster parents teach social, behavioral, and emotional skills to children and adolescents who are at risk of placement, or who have complex and significant behavioral health problems which cannot be managed at home. The course of treatment is focused on addressing the member’s condition to the point that the member’s condition can be safely, efficiently and effectively treated in a less intensive level of care or no longer requires treatment. The member’s condition includes consideration of the acute and chronic symptoms in the member’s history and presentation, including co-occurring behavioral health or medical conditions, informed by information collected by the provider following evaluation and treatment planning as described in Common Clinical Best Practices.

Placements in a therapeutic foster home are usually limited to two youths per family. Whenever appropriate, Therapeutic Foster Care supports family permanence by also training the parent(s)/guardian(s) to manage the member’s needs and behavior, and by providing case management.
Therapeutic Foster Care varies in intensity and duration in order to support the member’s ability to manage functional difficulties and enhance the member’s resiliency.

Admission Criteria
- See Common Criteria
  AND
- The member’s condition indicates that the member cannot be suitably cared for in the member’s home. Examples include:
  - The member is at risk for placement.
  - The member has complex and significant behavioral health problems that cannot be managed by the member’s family or caregiver.

Continuing Stay Criteria
- See Common Criteria

Discharge Criteria
- See Common Criteria

Clinical Best Practices
- See Common Clinical Best Practices
- The responsible Therapeutic Foster Care provider evaluates the member’s needs as well as the needs of the family or caregiver upon admission.
- The responsible Therapeutic Foster Care provider, in conjunction with the member and/or member’s family or caregiver, develops a plan that includes a description of the following:
  - The goal of Therapeutic Foster Care;
  - Objectives aimed at achieving the goal(s) of Therapeutic Foster Care, including interventions aimed at promoting effective parenting skills as appropriate.
- The plan includes instructions for accessing behavioral health services.
